

MS Office Mastery

Microsoft Word

Welcome to Microsoft Word

- Microsoft Word is a dedicated word processing program.
- Common uses include creating letters and resumes.
- It is also used to generate reports and flyers.
- The main goal is to master basic document creation.

Interface Tour

The Ribbon houses all the essential editing tools.

- **Quick Access Toolbar** is used for common tasks like **Save** and **Undo**.
- The **Ruler** helps you adjust document margins and set up tabs.
- Check the **Status Bar** for page count and current word count.

Starting a New Project

01 — Use a **Blank Document** for maximum creative control.

02 — Remember **Save As** when saving your file for the first time.

03 — Pre-made Templates are useful for resumes and calendars.

04 — Use **Ctrl + S** to regularly save document progress.

Text Basics & Formatting

- Select text using click and drag or double-click methods.
- Modify text font style, size, and color using the **Font Group**.
- Use keyboard shortcuts like **Ctrl+B** for **Bold** emphasis.
- Apply *Italic* and Underline formatting with **Ctrl+I** and **Ctrl+U**.

01 The next essential step is setting up paragraph alignment.

03 Choose **Left**, **Center**, **Right**, or **Justified** alignment options.

02 Apply **bullet points** and **numbering** to create easy-to-read lists.

04 Adjust **line and paragraph spacing** for document readability.

Using Styles for Speed

- Use built-in Styles like **Heading 1** for titles
- Styles are the secret to document creation speed
- Styles ensure a consistent and professional look
- Generate an automatic Table of Contents with styles
- Apply styles using the Styles gallery on the Home tab

Lists and Bullets

- Bulleted Lists are for items with no specific order.
- Numbered Lists are used for steps or rankings.
- Multilevel Lists are best for creating outlines.
- Type asterisk and Space to start a bullet instantly.

Bulleted List

- Introduction 1, 2, 3...
- Body Paragraphs 1, Chapter 1
- Conclusion 2) Chapter 2
- References 4) Chapter 3
5) Chapter 4

Multilevel List

- I. II, II
- II I. Main Topic A
- II. A. Subtopic 1
- A. B. Subtopic 2
- II. II. Main Topic B
- A- A. Subtopic 3
- 1- B. Detail 4
- 2- Detail 2

Inserting Media: Pictures

- Pictures can be uploaded directly from your computer.
- Insert shapes and icons for diagrams and visual flair.
- Learn how to wrap text around images easily.
- Wrap options include Square, Tight, and Behind Text.

Page Layout and Margins

- 01 — The slide covers both **Portrait** and **Landscape** page orientations.
- 02 — Margins can be set to Normal (1 inch) or Narrow (0.5 inch).
- 03 — Use the keyboard shortcut **Ctrl + Enter** for a new page break.

Working with Tables

- Inserting a grid using the Insert Table command
- Learn how to add or delete rows and columns
- Apply Table Styles for instant professional colors
- Use Table Design options to format your table

Hyperlinks & Navigation

- Use **Ctrl + K** to easily link to a website
- Access the Navigation Pane using **View > Navigation Pane**
- The Navigation Pane allows you to jump between document headings

Proofing Tools and Scores

- 01 — Look for the common red or blue squiggles
- 02 — Right-click on a word to access the Thesaurus
- 03 — The Editor sidebar provides a helpful writing score

Finishing and Exporting

Review Print Preview to check how the document appears on paper.
Export the finished document to PDF format for consistent sharing.
Share the document by emailing directly or using OneDrive.

Microsoft Excel

Welcome to Excel

- Excel is a powerful program for data analysis.
- The whole file is called a **Workbook**.
- A single tab within the file is a **Worksheet**.
- Use Excel for organizing and calculating information.

Anatomy of an Excel Cell

01 Columns are labeled with letters for easy identification.

03 Rows are labeled using numbers starting from one.

02 The Name Box displays the current address of the selected cell.

04 The Cell is the specific intersection of a column and a row.

Data Entry Basics

- Click on a specific cell and then simply begin typing.
- Pressing the **Enter** key moves the cell selection down.
- Pressing the **Tab** key moves the cell selection to the right.
- **Double-click** a cell or use the Formula Bar for editing.

Make Data Pop

The screenshot shows an Excel spreadsheet with the following data:

	A	B	K	E	D	G
1		Merged	Merged	Merged	8	
1	Merged			7400	2200	7
2				400	600	900
6						
7				800	800	50
5						
4				700	600	700
12				800	11,50	250
13						
15	Total Sales			€2228,18	€18,70	780
13					€70,90	
10						
10						
10						

- Apply Borders to data for a professional table appearance.
- Use Fill Color to effectively highlight important column headers.
- Wrap Text to fit lengthy sentences within a single cell.
- Combine multiple cells using Merge & Center for titles.

Managing Number Formats

- Excel needs to know what the number represents.
- General is the default format for number entries.
- Currency format adds the \$ or Rs. symbol automatically.
- Short Date converts a number like "030626" to "3/6/2026".
- Percentage format automatically turns a decimal like 0.1 into 10%.

Start Your First Formula

=A1++1		15
=A1+D1		15
=C3-D4	=SUM(A1:B2)	50
=E5*F6		2
=G7/H8		2
	=G7 H8	

- Every formula must start with an equals sign.
- Use the plus sign for addition formulas like =A1+B1.
- Subtraction formulas use the minus sign, for example, =A1-B1.
- Multiplication requires the asterisk symbol, such as =A1*B1.
- The forward slash is used for all division formulas like =A1/B1.

Excel Functions Overview

- Use the **SUM** function for efficiently adding a whole list.
- The **AVERAGE** function is used to calculate the mean of data.
- Apply the **MIN** function to quickly find the lowest value in a range.
- Use the **MAX** function to determine the highest value within a range.

Fill Handle Magic

01 Look for the tiny green square in the selected cell.

02 Drag the Fill Handle down to copy formulas instantly.

03 Dragging "January" creates the sequence of months.

Sorting & Filtering Data

01 — Sorting data helps organize information quickly.

02 — Quickly find specific information without scrolling a large list.

03 — Sort data either A to Z or Smallest to Largest.

04 — Filtering adds a dropdown arrow to your column headers.

References: Lock It Up

- Relative references change when you copy the formula.
- Absolute references stay locked on the specific cell.
- The **F4** shortcut locks the cell reference instantly.
- Use the dollar sign trick for absolute cell references.

Visualize Data: Charts

- Highlight your data and then choose Insert Charts.
- Column Charts are best for comparing different items.
- Line Charts are best for showing trends over time.
- Pie Charts show parts of a whole (100%) effectively.

Conditional Formatting Power

- Automatically change your cell colors based on the values.
- Use this feature to highlight important data quickly.
- Data Bars create small progress bars inside the cells.
- *Example: Turn all "Failed" grades to the color Red.*

Freeze Panes & Printing

- Keep headers visible while scrolling using Freeze Top Row.
- Select only the necessary data to print with Print Area.
- Use Scaling to fit all columns onto a single page.
- Avoid awkward cut-offs by utilizing "Fit All Columns on One Page".

► INSPIRING LIVES

Welcome to PowerPoint

- PowerPoint is effective presentation software.
- The main goal is to support your speech delivery.
- You must keep the slide text content very minimal.
- Use effective visuals to lead your presentation story.

PowerPoint Slide Design

- Use the Design tab for selecting pre-designed themes.
- Themes are pre-designed color and font schemes.
- Choose the appropriate structure from available slide layouts.
- The **Ctrl + M** shortcut key creates a brand new slide.
- Layout options include Title Slide and Two Content.

Text Boxes and Titles

Project Alpha Status Report

- ✓ Progress to date: 75% complete
- ✓ Key Milestones achieved: Q1 objectives met
- Challenges identified: Resource allocation issues
- Next Steps: Q2 planning and risk mitigation

 COMPRANTE LOGO

- Use text boxes and placeholders for content control.
- Follow a hierarchy with large titles and small bullets.
- Avoid "Walls of Text" for better presentation flow.
- Limit slides to a maximum of six lines of text.

SmartArt Graphics

- SmartArt graphics are better than just using simple bullets.
- Use SmartArt for creating effective process flows and cycles.
- SmartArt is best for creating clear organizational charts.
- Insert SmartArt graphics using the Insert tab option.

Working with Images

- Utilize the built-in library for high-quality stock images.
- The Designer pane offers automatic layout suggestions for your visuals.
- Add brief descriptions called Alt Text for better accessibility.

Adding Media Elements

- Embedding videos from your PC or YouTube directly onto a slide.
- Add audio content like background music or voiceover recordings.
- Set media to begin playing "Automatically" or "On Click".

Transitions: The "Between"

- Subtle transitions like Fade or Push look professional.
- The Morph transition smoothly moves objects between slides.
- Keep transition durations brief, around 0.5 to 1.0 seconds.

PowerPoint Animations

- Entrance animations control how slide objects first appear.
- Emphasis animations highlight objects already on the slide.
- Exit animations manage how objects leave the screen view.
- Use the **Animation Pane** to manage effect order and timing.

Organize with Slide Sorter

01 Use **Slide Sorter** view to see the overall presentation.

03 Easily reorder slides by dragging and dropping them into place.

02 Sections can be named (e.g., Intro, Body, Conclusion) for clarity.

04 Create logical Sections to organize longer presentations efficiently.

Speaker Notes Essentials

- Keep your speaker script in the pane at the bottom.
- Speaker notes keep your slides clean and simple.
- Have all the presentation facts ready in the notes pane.
- Speaker notes do not display on the projected screen.

Presenter View Secrets

- Presenter View is the secret screen for the speaker.
- See your notes, next slide, and a timer simultaneously.
- Trigger Presenter View using the keyboard shortcut **Alt + F5**.

Record and Export

- Save your presentation as a video with your voice.
- Export the final presentation to PDF for handouts.
- Use the 'Pack and Go' feature for compatibility.
- Ensure all custom fonts and videos transfer easily.

Presentation Pro Tips

Press F5 to begin the presentation from the start.

Use Shift + F5 to start the show from the current slide.

Press the B key to temporarily black out the screen.

Press the W key to temporarily white out the slide screen.
